# **PRODUCT INFORMATION**

Please take a moment to fill out the information below in order to aid us with any future sales or service inquiries. Model number and serial number information can be found on the serial tag located inside the control box and/or on the lower exterior of the can. Key number can be found on the tag that comes attached to the keys. There may be more than one key number depending on unit.

Please keep this information with your records.

# **Specifications**

specifications:

Voltage: 120VAC, 60Hz

Amperage: (1) 20 amp service is required for this unit

Weight: 60-70 lbs

Motors: (1) 120VAC vacuum motor Fuses: (1) 20 amp inline fuses

Duty cycle time 4 minutes on, 4 minutes off.

NOTE: "UNIT INTENDED FOR COMMERCIAL USE ONLY"

## IMPORTANT SAFETY INSTRUCTIONS

When using an electrical appliance, basic precautions should always be followed, including the following:

## READ ALL INSTRUCTIONS BEFORE USING (THIS APPLIANCE)

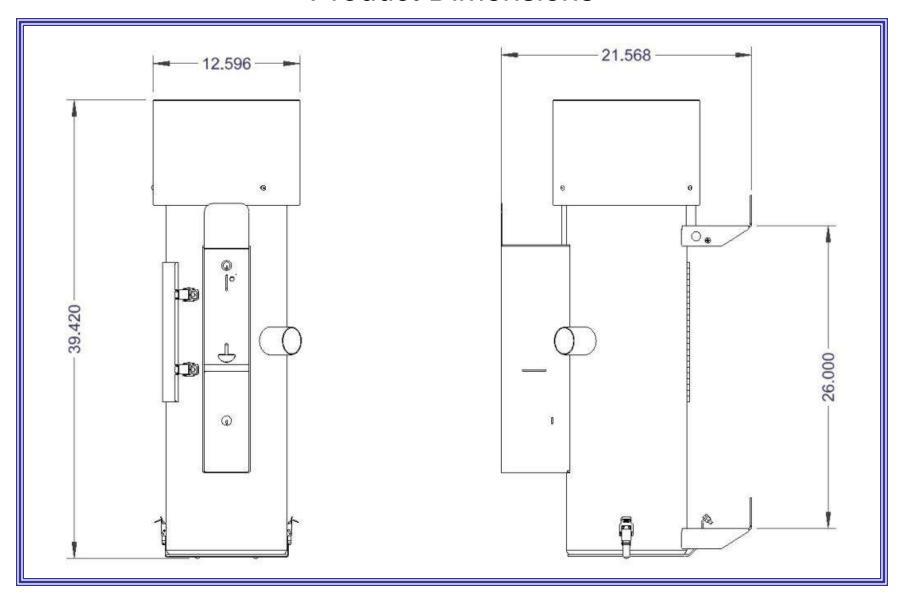

#### **WARNING – To reduce the risk of fire, electric shock, or injury:**

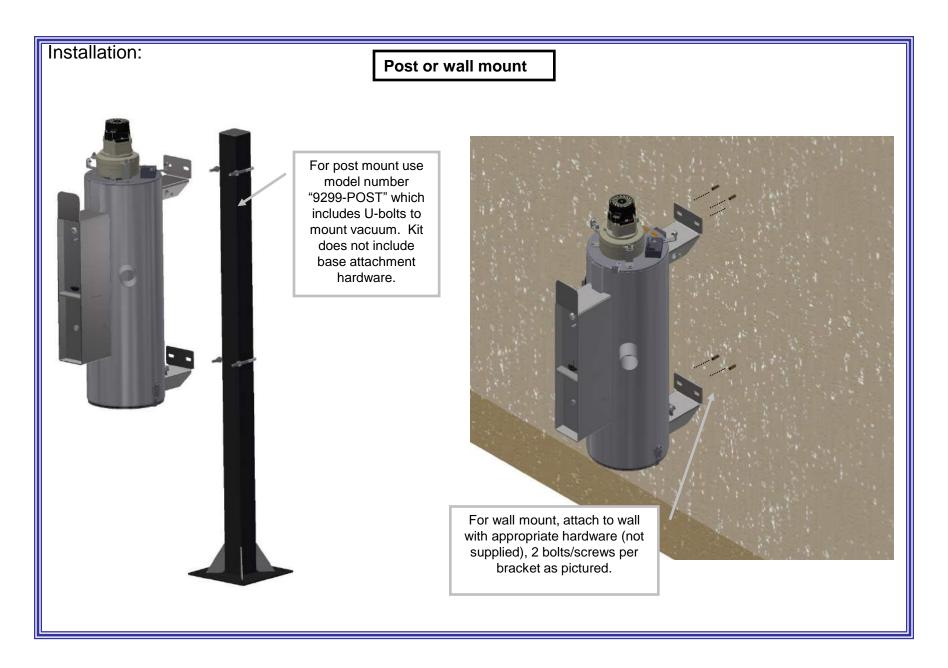

- Do not use on wet surfaces.
- Use only as described in manual. Use only manufactures recommended attachments.
- Do not allow to be used as a toy. Close attention is necessary when used by or near children.
- Do not put any object into openings. Do not use with any opening blocked; keep free of dust, lint, hair and anything that may reduce air flow.
- Keep hair, loose clothing, fingers, and all parts of body away from openings and moving parts.
- Do not use to pick up flammable or combustible liquids, such as gasoline, or use in areas where they may be present.
- Do not pick up anything that is burning or smoking, such as cigarettes, matches, or hot ashes.
- Do not use without dust bag and/or filters in place.

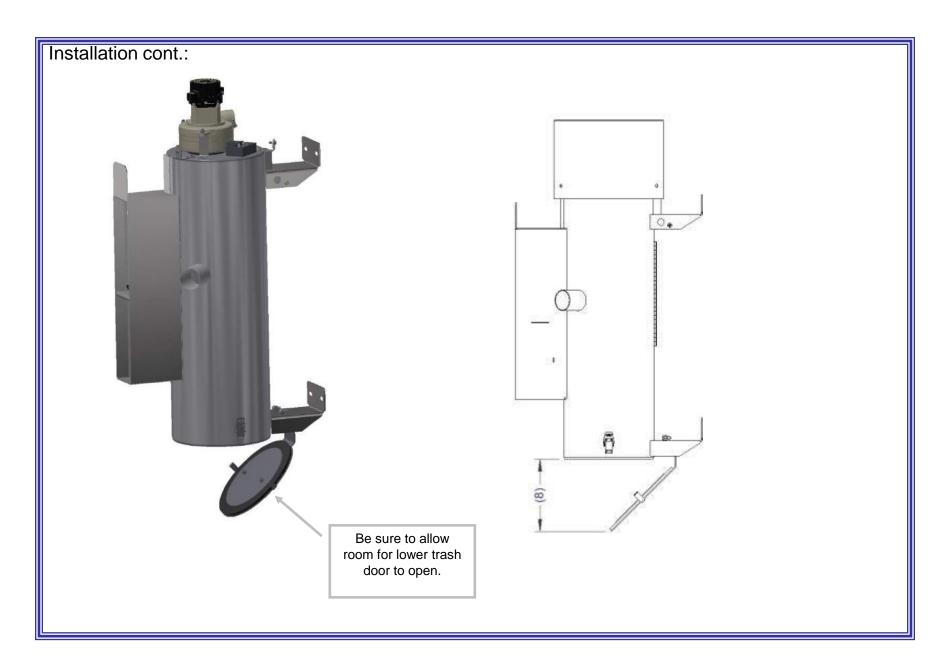

#### SAVE THESE INSTRUCTIONS

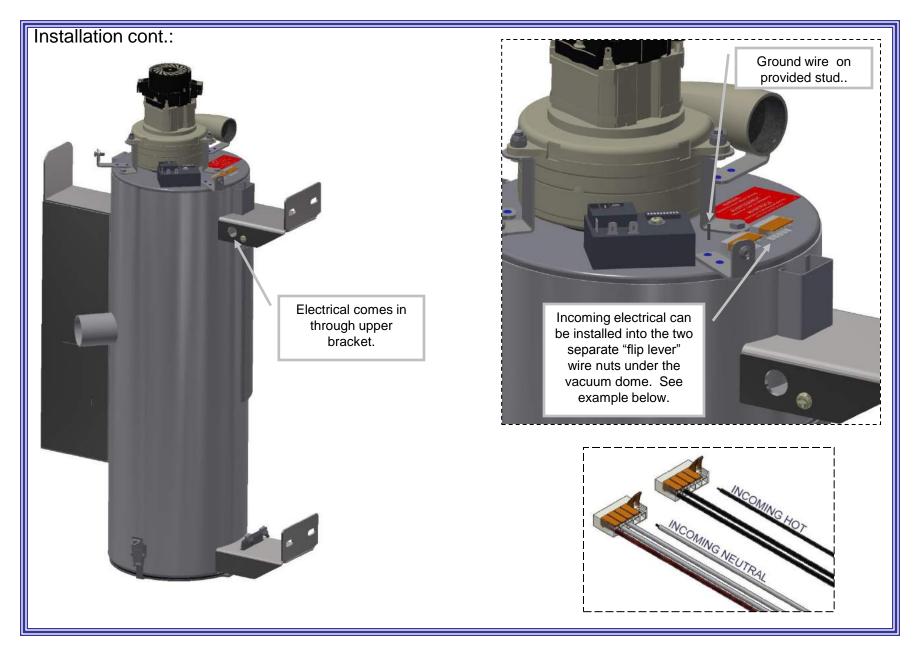

- Installation Instructions:
- Determine location to mount unit ("DANGER" "THIS EQUIPMENT INCORPORATES PARTS SUCH AS SWITCHES,
  MOTORS, OR THE LIKE THAT TEND TO PRODUCE ARCS OR SPARKS THAT CAN CAUSE AN EXPLOSION. WHEN
  LOCATED IN GASOLINE-DISPENSING AND SERVICE STATIONS INSTALL AND USE AT LEAST 20 FEET (6 M)
  HORIZONTALLY FROM THE EXTERIOR ENCLOSURE OF ANY DISPENSING PUMP AND AT LEAST 18 INCHES (450
  MM) ABOVE A DRIVEWAY OR GROUND LEVEL."
- Run service to the location
- **Grounding Instructions**: This appliance must be connected to a grounded metal, permanent wiring system; or an equipment-grounding conductor must be run with the circuit conductors and connected to the equipment-grounding terminal or lead on the appliance.
- Circuit must be protected by GFCI device.
- All local and national electric codes must be followed for installation and use.
- Licensed electricians are recommended for installation.

# **Product Dimensions**

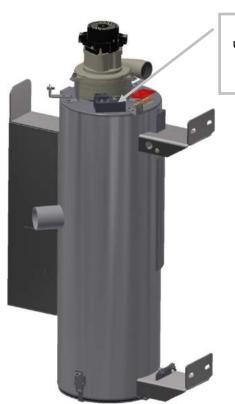

Timer located under dome on pay units.

After attaching the hose the unit can be turned on and programmed.

## **Programming Instructions:**

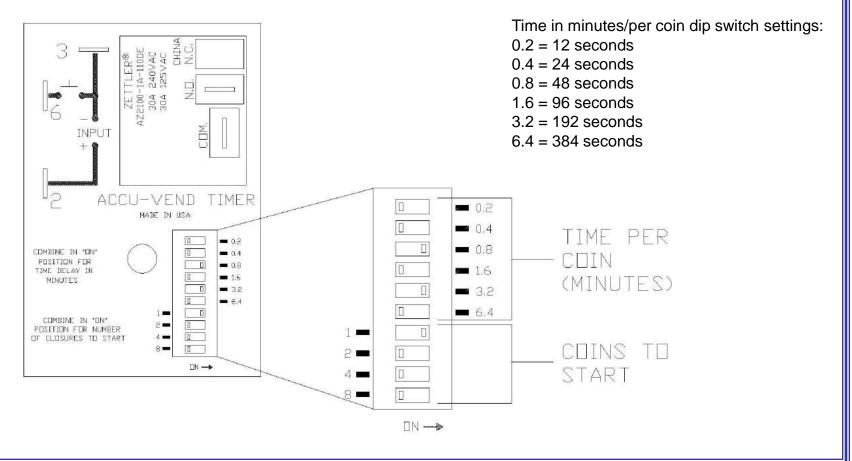

#### Coin acceptor:

No programming to acceptor needed if unit was purchased with the standard Imonex Z3 acceptor (8149 JEA part number) as it is built to accept US quarters.

If different acceptor was purchased, see additional literature sent with unit for programming information.

#### **COIN OPERATED Timer Programming:**

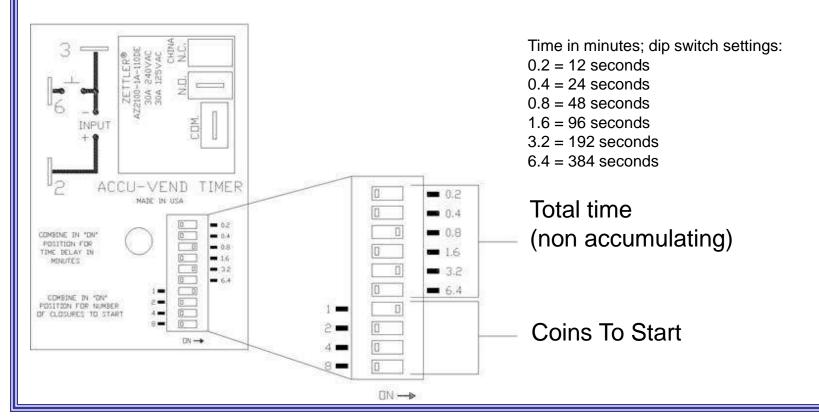

The below timer pictured is the standard SSAC model that allows the end user to select the "coins to start" and the "time per coin" by settings series of dip switches. The number of "coins to start" dip switch is how many quarters are needed to make the machine come on. In the below example, the "one coin" dip is selected which makes the unit come on with one coin. The "time per coins" will then need to be set, but a good rule of thumb would be 4 minutes which requires dip switches 3.2 and .8 to be set to on. This scenario means 1 quarter will provide 4 minutes of vacuum time. The time per coin setting can be modified as desired by simply adding or subtracting time. If the operator would later decide to increase the cost of the unit to "2" quarters, the 2 dip switch would need to be in the on position (all others off) and the time dip switches would need to have the 1.6 and 0.4 dips selected. This would allow 2 minutes of time for each quarter for a total of 4 minutes for two quarters.

### **COMMERCIAL VAC Programming:**

JE Adams commercial vacuum models typically come with an "on/off" toggle switch, but are also available with the optional push button kit which incorporates the use of a timer. The below timer pictured is the standard SSAC model that allows the end user to select the "coins to start" and the "total time" by settings series of dip switches. The number of "coins to start" dip switch is how many quarters are needed to make the machine come on. In the below example, the "one coin" dip is selected which makes the unit come on with one coin. The "total time" will then need to be set, but a good rule of thumb would be 4 minutes which requires dip switches 3.2 and .8 to be set to on. This scenario means 1 quarter will provide 4 minutes of vacuum time. The total time can always be changed by adding or subtracting time. If the operator would later decide to increase the cost of the unit to "2" quarters, the 2 dip switch would need to be in the on position (all others off) and the time dip switches would still be 3.2 and .8 dips selected for 4 minutes. Timer is non accumulating so "coins to start" setting is just to make the machine come on time and "time" is total time regardless of coins to start.

NOTE: In the case of a free vend machine that incorporates the use of a push button, COINS TO START is set at 1.

## **Operating Instructions:**

- Insert payment or push button or toggle switch to start vacuum.
- Once service is used, hang up hose.

#### **Maintenance:**

- All servicing of machine should be conducted by an authorized service representative!
- Cartridge filter some with a nylon cover that should be accessed and shaken down weekly, depending on level of
  use. It is recommended to keep a new cartridge filter and nylon cover on hand so that service is not interrupted
  when filter is due to be replaced.
- To maintain performance, empty dirt bin from the canister on a regular basis.
- Periodically inspect wires and connections for wear or fatigue.
- Check door and motor gaskets periodically for signs of wear or damage and replace as needed.
- Check vac hose for cracks on a weekly basis.
- Clean canister with a stainless steel cleaner as needed. Decals can be cleaned with mild soap and water.
- Check motor brushes every month for excessive wear. Motor brushes should be changed immediatly if they are shorter than ½". *Please disconnect power before doing this!*

DISCONNECT POWER BEFORE SERVICING OR TROUBLESHOOTING!

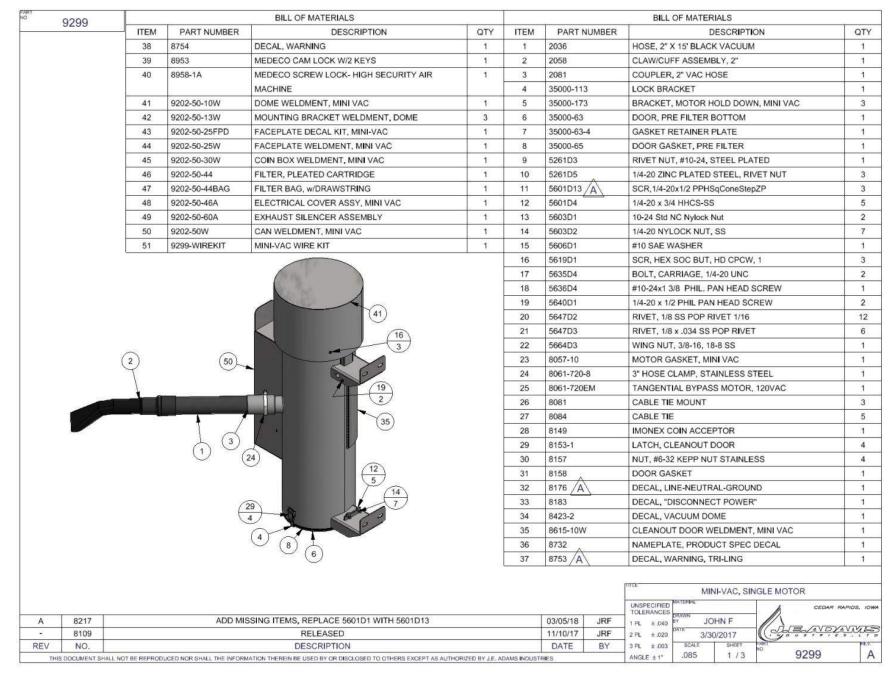

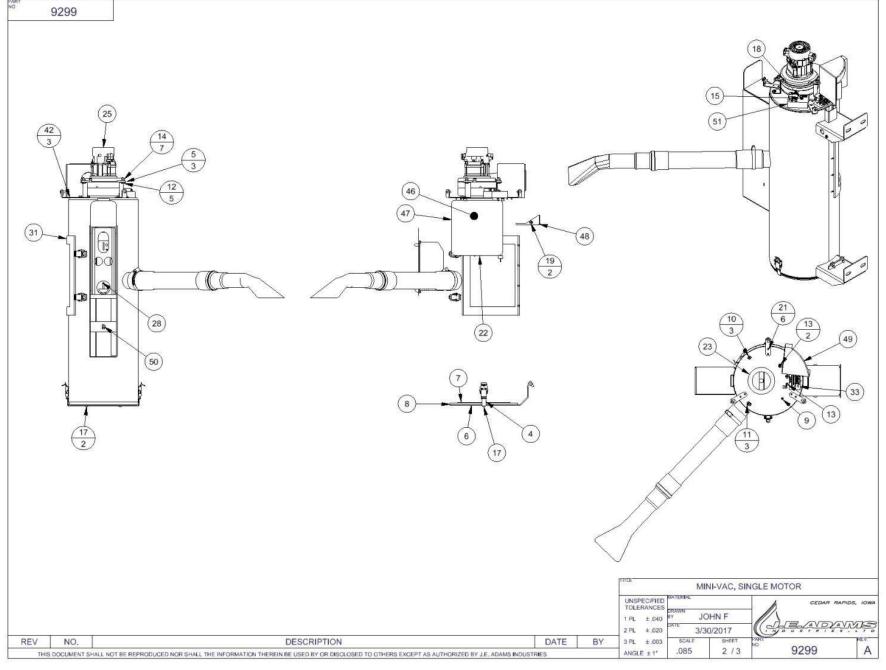

## Troubleshooting:

Problem	Possible cause	Solution
Unit will not come on.	No power to machine.	Check incoming power.
	Loose or bad connection.	Check incoming power connection.
	Timer has no output.	Check output terminal of timer for voltage.
	Coin mech switch or push button is not sending signal to	Bypass switch and touch the two wire together -
	timer.	USE CAUTION 120V!!
	Vaccum motor is bad.	Replcae vacuum motor.

Problem	Possible cause	Solution				
Machine is behaving	Is the incoming power at 120V?	Check voltage and monitor while machine				
erratically.		runs. Low voltage can cause erratic behavior.				
	Are any of the machines wires worn through or connections	Inspect wiring and connections. Look for				
	not making contact?	sharp bends in wires and places where wire is				
		against the metal chassis.				
Unit keeps tripping	Inadequate wire size ran to machine.	Call electrician and install proper wire size for				
breaker.		electrical service versus length or run.				
	Vacuum motor is bad.	Replace vacuum motor.				
	Wrong size breaker.	Install correct breaker providing wire size is				
		rated for that size breaker.				
Fuses for vac motors	Inadequate wire size ran to machine.	Call electrician and install proper wire size for				
keep blowing.		30amp service versus length or run.				
	Vacuum motor is bad.	Replace vacuum motor.				
	Motor brushes may be bad or too short.	Replace motor brushes.				
Lack of vacuum suction.	Vac hose clogged?	Clean debris from vac hose.				
	Filter needs cleaned or dirt chamber needs emptied?	Clean filter or replace and empty lower dirt				
		chamber.				
	Vac hose is split?	Replace/repair vac hose.				
	Cleanout door gaskets torn or worn?	Replace gaskets.				
	Vac motor gasket is worn or motor is not tight against.	Inspect/replace gaskets and assure motor is				
		tight against gasket.
